Corporate Performance Report

Quarter 2

2018/19 financial year

Adults Committee

Business Intelligence Cambridgeshire County Council business.intelligence@cambridgeshire.gov.uk

Data Item	Explanation
Target / Pro Rata Target	The target that has been set for the indicator, relevant for the reporting period
Current Month / Current Period	The latest performance figure relevant to the reporting period
Previous Month / previous period	The previously reported performance figure
Direction for Improvement	Indicates whether 'good' performance is a higher or a lower figure
Change in Performance	Indicates whether performance is 'improving' or 'declining' by comparing the latest performance
	figure with that of the previous reporting period
Statistical Neighbours Mean	Provided as a point of comparison, based on the most recently available data from identified
	statistical neighbours.
England Mean	Provided as a point of comparison, based on the most recent nationally available data
RAG Rating	 Red – current performance is off target by more than 10%
	• Amber – current performance is off target by 10% or less
	• Green – current performance is on target or up to 4% over target
	• Blue – current performance is over target by 5% or more
	• Baseline – indicates performance is currently being tracked in order to inform the target setting
	process
	• Contextual – these measures track key activity being undertaken, but where a target has not been
	deemed pertinent by the relevant service lead
Indicator Description	Provides an overview of how a measure is calculated. Where possible, this is based on a nationally
	agreed definition to assist benchmarking with statistically comparable authorities
Commentary	Provides a narrative to explain the changes in performance within the reporting period
Useful Links	Provides links to relevant documentation, such as nationally available data and definitions

Page 3 of 12

Indicator 14: 1E Proportion of service users (18-64) with a primary support reason of learning disability support in paid employment (year to date)

Return to Index December 2019

Indicator Description

The measure shows the proportion of adults with a primary support reason of learning disability support who are recorded as being in paid employment. The information would have to be captured or confirmed within the financial year reporting period.

The measure is focused on 'paid' employment. Voluntary work is not collected in SALT and thus, is excluded from the measure. Paid employment is measured using the following two categories: - Working as a paid employee or self-employed (16 or more hours per week): and.

- Working as a paid employee or self-employed (up to 16 hours per week)

Calculation: (X/Y)*100

Where:

X: All people within the denominator, who are in employment. The numerator should include those recorded as in paid employment irrespective of whether the information was recorded in an assessment, review or other mechanism. However, the information would have to have been captured within the financial year.

Y: Number of working-age clients with a primary support reason of learning disability support "known to CASSRs" during the period.

Commentary

Performance at this indicator has been improving recently, with the year end figure for 2018-2019 exceeding that of the previous 3 years.

As well as a requirement for employment status to be recorded, unless a service user has been assessed or reviewed in the year, the information cannot be considered current. Therefore this indicator is also dependent on the review/assessment performance of LD.

The migration to Mosaic has had a positive impact on performance at this indicator by prompting workers to update of the employment status at each assessment/review.

To support delivery of the LD Employment Strategy a working group has been formed to develop a targeted workplan to improve employment opportunities for this cohort of service users.

Although performance is above target at the end of Q2, the indicator remains amber as there is still a significant risk that the year end target may not be met at year end due to the complexities involved in securing paid employment in the current economic climate. This judgement will be kept under review and will be revised in subsequent reports if the recent trends continue.

Direction of travel compares against the same period in the previous year.

Page 4 of 12

Indicator 18: 2A PART 2 - Admissions to residential and nursing care homes (aged 65+), per 100,000 population

Return to Index December 2019

2017/18

Indicator Description

This measure reflects the number of older people whose long-term support needs are best met by admission to residential and nursing care homes relative to the group population. The measure compares council records with ONS population estimates. People counted in this measure should include:

- Users where the local authority makes any contribution to the costs of care, no matter how trivial or location of residential or nursing care - Supported users and self-funders with depleted funds (set out in The Adult Social Care Outcomes Framework 2018/19 Handbook of Definitions)

Calculation: (X/Y)*100,000

Where:

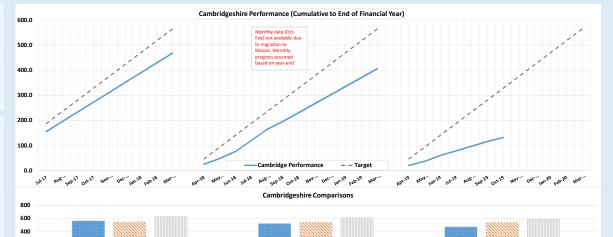

X: The sum of the number of council-supported older people (aged 65 and over) whose long-term support needs were met by a change of setting to residential and nursing care during the year (excluding transfers between residential and nursing care).

Y: Size of older people population (aged 65 and over) in area (ONS midyear population estimates).

2015/16 (Mean England and Statistical Neighbour data obtained from NHS Digital)

Commentary

200

٥

The implementation of the Transforming Lives model, combined with a general lack of available residential and nursing beds in the area has continued to keep admissions below national and statistical neighbour averages.

Cambridgeshire

2016/17

Statistical Neighbours

🛙 England

N.B. This is a cumulative figure, so will always go up. An upward direction of travel arrow means that if the indicator continues to increase at the same rate, the ceiling target will not be breached.

Delays in loading new services may result in this indicator increasing retrospectively as residential and nursing services are recorded in data systems. As a result this indicator is limited to green only, as the figure is liable to increase.

Direction of travel is compared to the same period in the previous year.

Page 5 of 12

Indicator 20: 2C(2) Average monthly number of bed day delays (social care attributable) per 100,000 18+ population

٥

Indicator Description

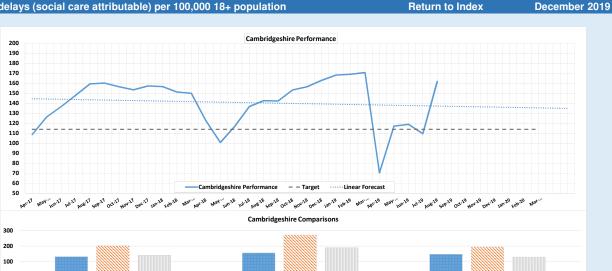

This measure reflects the number of delays in transfer of care which are attributable, to social care services. A delayed transfer of care from acute or non-acute (including community and mental health) care occurs when a patient is ready to depart from such care and is still occupying such a bed.

Calculation: (X/Y)*100,000

Where:

X: The average number of delayed transfers of care (for those aged 18 and over) each day that are attributable to Social Care. This is the average of the 12 monthly "DTOC Beds" figures calculated from the monthly Situation Report (SitRep).

Y: Size of adult population in area (aged 18 and over)

(Mean England and Statistical Neighbour data obtained from NHS Digital) Commentary

2015/16

August saw a steep increase in the number of delays compared to the preceding few months. Although recent performance is exceeding the target ceiling, the period from Apr-Jul 19 has seen figures below or within 10% of target, which, relatively speaking is significantly better than at any other 3 month period in recent years.

The Adult Social Care Outcomes Framework 2018/19 Handbook of Definitions:

https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_data/file/68 7208/Final_ASCOF_handbook_of_definitions_2018-19_2.pdf

Across this period, delays arranging domiciliary care accounted for 62% of social care attributable bed day delays. This reason was the most common cause for ASC delays for the top 4 hospital trusts reporting DToCs in Cambridgeshire, Cambridge University Hospitals FT, North West Anglia FT, Cambridgeshire & Peterborough FT and Queen Elizabeth Hospital.

The Council is continuing to invest considerable amounts of staff and management time into improving processes, identifying clear performance targets and clarifying roles & responsibilities. We continue to work in collaboration with health colleagues to ensure correct and timely discharges from hospital.

Page 7 of 12

Indicator 105: Percentage of adult safeguarding enquiries where outcomes were at least partially achieved

Return to Index December 2019

Indicator Description

The Care Act 2014 (Section 42) requires that each local authority must make enquiries, or cause others to do so, if it believes an adult is experiencing, or is at risk of, abuse or neglect. An enquiry should establish whether any action needs to be taken to prevent or stop abuse or neglect, and if so, by whom.

As part of the statutory reporting of safeguarding cases, those adults at risk may be asked what their desired outcomes of a safeguarding enquiry are. Where desired outcomes have been expressed, upon conclusion of the safeguarding enquiry the achievement of these outcomes is reported.

This data is collected as part of the statutory Safeguarding Adults Collection.

Calculation: (X/Y)*100

Where:

X: The number of concluded enquiries where outcomes were either achieved or partially achieved.

Y: The number of concluded enquiries where the adult(s) expressed desired outcomes.

(Mean England and Statistical Neighbour data obtained from NHS Digital)

Commentary

Performance at this measure is strong and remains consistent with national performance and that of statistical neighbours. There is room for improvement in the number of adults at risk being asked to express their desired outcomes. In 2017/18, approximately 17% of adults at risk who were subject to a S42 enquiry were not asked for their desired outcomes.

Page 8 of 12

Indicator 126: 1C(2A) Proportion of adults receiving Direct Payments

Indicator Description

Research has indicated that personal budgets impact positively on wellbeing, increasing choice and control, reducing cost implications and improving outcomes.

The implementation of the SALT return has enabled this measure to be strengthened. Its scope has been limited to people who receive longterm support only, for whom self-directed support is most relevant, and this will better reflect councils' progress in delivering personalised services for users and carers. Both measures for self-directed support and direct payments have also been split into two, focusing on users and carer separately.

This measure reflects the proportion of people who receive a direct payment either through a personal budget or other means.

Calculation: (X/Y)*100

X: The number of users receiving direct-payments and part-direct payments at the financial year end.

Y: Clients aged 18 or over accessing long term support at the financial year end.

The Adult Social Care Outcomes Framework 2018/19 Handbook of Definitions: https://assets.publishina.service.agv.uk/government/uploads/stystem/uploads/attachment_data/life/ 22026/Final_ASOC_handbook_od_definitions_2018-19_2.pdf

(Mean England and Statistical Neighbour data obtained from NHS Digital) Commentary

The proportion of adults receiving Direct Payments increased slightly at the end of 2018/19 bring this indicator to within 10% variance of target. The target for this indicator was increased during 2018 in order to reflect the eastern region average, causing the indicator to be below target. Performance in September climbed slightly compared to the previous month.

Work is underway to investigate why uptake of direct payments has reduced and put steps in place to address any issues as we would hope to increase use of direct payments as part of the move towards a more personalised approach.

Page 9 of 12

Indicator 140: 2D Percentage of new clients where the sequel to Reablement was not a long-term service

Return to Index December 2019

Indicator Description

This measure will reflect the proportion of those new clients who received shortterm services during the year, where no further request was made for ongoing support. Since short-term services aim to reable people and promote their independence, this measure will provide evidence of a good outcome in delaying dependency or supporting recovery - short-term support that results in no further need for services.

Short-term support is defined as 'short-term support which is designed to maximise independence', and therefore will exclude carer contingency and emergency support. This prevents the inclusion of short-term support services which are not reablement services.

Calculation: (X/Y)*100

Where:

X: Number of new clients where the sequel to "Short Term Support to maximise independence" was "Ongoing Low Level Support"; "Short Term Support (Other)"; "No Services Provided - Universal Services/Signposted to Other Services"; "No Services Provided - No identified needs".

Y: Number of new clients who had short-term support to maximise independence. Those with a sequel of either early cessation due to a life event, or those who have had needs identified but have either declined support or are self-funding should be subtracted from this total.

Page 11 of 12

Indicator 162: Number of carers receiving Council funded support per 100,000 of the population

Indicator Description

Carers assessment and targeted support can enable carers to continue caring for family members in their own homes and prevent carer breakdown.

The method used for calculating this measure is as follows:

R= X/Y*100000

Where R is the rate per 100 000 members of the population.

X is the sum of all carers supported by the following the following delivery mechanisms (as defined by the Social Care SALT Return): "Direct Payment only", "Part Direct Payment", "CASSR Managed Personal Budget", and "CASSR Commissioned Support only".

And Y is the adult population of the county based on the relevant mid-year estimate from the Office for National Statistics.

(Mean England and Statistical Neighbour data obtained from NHS Digital) Commentary

Recent performance (end of year figures in 2017/18 and 2018/19) has shown CCC to be much higher than statistical neighbours and the national average for the number of carers receiving Council-funded support per 100,000 population.

In previous years, Direct Payments were often used as a standard delivery mechanism for support for a carer. Nearly all of the carers supported by the Council received a Direct Payment. There is now a greater focus on targeting support to carers in more varied ways which do not necessarily involve one-off grant payments.

Therefore, we are expecting to see a reduction in the number of carers supported on this measure. The performance target represents an ambitious 50% reduction of Direct Payments from the 2018/19 baseline (from around 2,500 Direct Payments issued in 2018/19 to 1,270). Administrative data about the issue of Direct Payments suggests that the new approach is working, as between April - September 2019, the average number of Direct Payments issued to carers has fallen to 28 per month, from an average of 75 per month in Jan-Mar 2019. This has resulted in much better performance than target.

Note on indicators:

The values for 2017/18 and 2018/19 use the statutorily defined indicator which CCC submits annually as part of the national adults social care returns. This allows comparison to other areas. Following the migration to Mosaic further work is needed to ensure that the data extraction processes comprehensively include all types of support provided to carers. Therefore the indicator values reported here for 2019/20 use administrative data about Direct Payments (which made up 95% of the services provided in 2018/19). The values for this indicator will accumulate through the year which is why 'change in performance' is not applicable from month using this indicator.
